

terminal to which the display size have been sent, and controls the display control unit to synthesize the received captured image data into single screen multi-window format data to be displayed on the display screen of the display; and

a data storage storing a display status management file for managing a display status of the terminal display including a capture area management flag for managing as to whether a capture area in the screen capture function is designated in a full-screen capture mode or a partial-screen mode;

wherein the communication unit sends the display size determined by the display status management file and the information generator to each of the terminals and receives the image data which has been captured by each terminal for a whole or a part of the display screen of the terminal display in accordance with the capture area management flag in the display status management file.

6. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 5, wherein the display control unit has an insertion function for inserting a new window into a current display screen to display the new window.

7. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 5, wherein the terminal that provides the captured image data to be displayed on the display screen of the display is selected in a two-way communication of the communication unit by one of the network interactive display device and the terminal.

8. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 5, wherein the display control unit has an expansion display function for expanding a predetermined window from among a plurality of windows forming a multi-window screen displayed on the display screen of the display.

9. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 5, wherein the display control unit has a single-window screen selection

function for switching the display screen from a predetermined window from among a plurality of windows forming a multi-window screen displayed on the display screen of the display to a single-window full screen.

10. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 5, wherein the display control unit has an erase function for erasing a predetermined window from among a plurality of windows forming a multi-window screen displayed on the display screen of the display.

11. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 10, wherein the predetermined window is selected by one of the network interactive display device and the terminal in a two-way communication of the communication unit thereof.

12. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 5, wherein the image captured data received from the terminal is obtained by designating the whole or a portion of the display screen of the terminal.

13. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 5, wherein the captured image data received from the terminal is obtained by detecting and capturing only a change on the display screen of the terminal.

14. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 5, further comprising a display size determining unit that divides the display screen of the display into windows of the number equal to the number of terminals to be displayed, and determines a display size of the window to which the terminal to be displayed is assigned, and a controller that sends the display size determined by the display size determining unit to the corresponding terminal through the communication unit, wherein the controller receives, through the communication unit, the captured image data, having the converted size equal to the display size of the window assigned to the terminal, from the

terminal to which the display size is sent, and controls the display control unit to synthesize the received captured image data into single screen multi-window format data to be displayed on the display screen of the display.

15. (Currently Amended) ~~A network interactive display device~~ The projector according to claim 14, wherein an aspect ratio of the window assigned to the terminal to be displayed is equalized to an aspect ratio of the display screen of the display of the terminal.

16-30 (Canceled)

31. (Currently Amended) The projector according to ~~claim 1~~ claim 5, wherein when the captured image data captured using the capture function are of a part of the screen of the terminal display, a partial size of the part is sent from the terminal to the projector and the display size of the window assigned to the terminal is determined on the basis of the partial size instead of the received screen size of the terminal display.
